CORE COMPETENCIES

Streamlined Design and Rapid Prototyping – The expeditious design, development, or modification of one or more systems or subsystems utilizing the quantitative design characteristics of systems engineering to provide the most optimal solution.

Production, Modification, and Integration – Processes of converting raw materials by fabrication into required material for use in development of or modification to one or more systems or subsystems, including the functions of production-scheduling, inspection, quality control (QC), and related processes.

Lifecycle Sustainment Activities – The implementation, management, and oversight of all activities associated with the acquisition, development, maintenance, fielding, sustaining, and disposal of a DoW system. This also includes the warehousing of classified controlled, sensitive, hazardous, warranty, shelf life, and serialized property.
